Debt was the single most important factor making people younger and had little impact on those elderly. Aging was also more strongly correlated to education and income than to debt. Authors: Carlos Penafiel, Axel Brunner, Robert Machen Published: Proceedings of the National Academy of Sciences DOI: 10.1073/pnas.0703501104 Aging Lifestyle Is Not Programmed In their study in Proceedings of the National Academy of Sciences, the researchers investigated the relationship between living standards and longevity. Using the newly available records from the Human Mortality Database they examined the lifespan of over 500 million men and women to determine the main drivers of longevity, which included income, age at first marriage, number of years spent in school, and household debt. In a world with increasing population and aging, the study could have implications for health care and development. The researchers found that while greater education and income were significantly correlated to longer lifespan, household debt was not. Additionally, the degree of income inequality in the developed world did not affect longevity, whereas more unequal household income distributions were associated with higher mortality in the developing world. The researchers also found that household debt actually had less impact on the lifespan of women than men, whereas the health effects of income inequality were more pronounced in men. "Excessive house credit was not associated with early death among men in the United States or in any other country" – said lead author Axel Brunner. "Our findings reinforce the notion that living standards are not determined by biological inheritance, as previously thought. If current trends in the United States persist, the elderly population is expected to begin a sharp decline around 2040." The study also found that adults in their late 20s were five times more likely to die between ages 50 and 64 than individuals over the age of 50, and that elderly people were less likely to die from a heart attack or stroke. They had a higher chance of dying from the flu or pneumonia, diabetes, suicide, or from chronic diseases. "With the growing numbers of elderly citizens in developing countries facing chronic diseases, our results suggest that lower living standards may increase the burden of disease in such countries," explained Brunner. In summary, the study found that people with high wages had a longer life expectancy, but that higher household debt did not affect their life expectancy. This meant that the increasing burden of debt, especially in developing nations

What's New In?

Cars 2 (video game) Cars 2 is a racing game developed by Pixar Animation Studios and published by Electronic Arts. It is the sequel to the 2009 racing video game Cars. Gameplay The game features both offline and online gameplay, and is a vehicle simulation game in the racing genre. Similar to the first game, there are various types of vehicles and track types. Three different game modes are available: Arcade, Time Trial, and Multiplayer. The online mode features multiple scenarios that can be played. Story Cars 2 takes place between the events of the first game. Lightning McQueen has moved to Butch's garage and taken his place behind the wheel. He drives the same race car that he did in the first game, with a new, more challenging body and improved performance. Unlike the first game, where Lightning lost every race he competed in, he now has won every race he competed in. This leads him to the conclusion that Lightning is now a racing legend. On a visit to his old hometown Radiator Springs, Lightning encounters a sequel to his first experience of Bikes & Beans. He is now famous worldwide and has become a local hero. Gameplay Cars 2 differs from the original in several ways. The character of Lightning McQueen is more realistic and humorous, where prior games allowed for wireframe characters. It also features vehicle damage, which the first game did not. As in the first game, the player can drive the same car or make various adjustments, but new features and new track types also appear. The game includes worldwide events, and revamps some tracks. The game also features improved graphics and an enhanced physics model. Players can unlock several non-player characters and stages. Cars 2 features a career mode which allows for the player to unlock new vehicles, livery designs, and stage tracks. The storyline of the game continues after the first game. There are more than twenty voice actors in the game. Reception Cars 2 was met with mixed reception, as GameRankings gave it a score of 63%, while Metacritic gave it 61 out of 100. IGN gave the game 7.1/10, saying "I'll be the first to admit that Cars 2 isn't really all that good, and doesn't really add anything new to the racing genre. What it does it does well though, and it's doing that so well that it's almost made me regret not having played the game all these years ago
